

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

- 1 (Currently amended).        A method of modifying an image to be displayed on a display;
- (a)    receiving at least a portion of said image; and
- (b)    modifying said image to alternatively increase or decrease said at least one pixel's luminance output by alternatively overdriving at least one pixel of said image, for a current frame, to a current value that is selected based upon:
- (i)    at least one the predicted displayed luminance value of said pixel in a respective ones of at least one subsequent frame of said previous image; and
- (ii)    at least one previously displayed luminance value of said pixel in respective ones of at least one previous frame of said image to increase or decrease said at least one pixel's luminance output.
- 2 (Currently amended).        The method of claim 1 wherein said at least one previously displayed luminance value of said pixel are stored in respective frame buffers ~~image is the next sequential frame after said previous image.~~
- 3 (Currently amended).        The method of claim ~~1-2~~ where a first said ~~predicted-actual~~ previously displayed luminance value is at a state where liquid crystal material associated with said pixel of said display is not at an equilibrium state, and where a second said previously displayed luminance value is at a state where said liquid crystal material

Appl. No. 10/676,312

Amdt. dated January 9, 2008

Reply to Office action of October 9, 2007

associated with said pixel is at an equilibrium state, and where said second said  
previously displayed luminance value is from the earliest sequential said at least one  
frame, upon which selection of said current value is based.

4-113 (Canceled).
